TITLE OF INVENTION	
54	A MACHINE LEARNING BASED PRESCRIPTION SCANNER WITH ERROR DETECTION SYSTEM

57	The present invention titled "ML Based Prescription Scanner with Error Detection System" relates to an artificial intelligence-based healthcare safety platform designed to automatically interpret handwritten medical prescriptions and detect potential medication errors. The system employs optical character recognition techniques to extract prescription details including medicine names, dosage values, frequency of administration, and treatment duration from handwritten inputs. The extracted data is structured using natural language processing and analyzed through a machine learning-based safety evaluation engine in conjunction with a validated drug knowledge database containing clinical safety guidelines, dosage limits, and drug interaction information. The system is configured to identify unsafe dosage levels, abnormal prescription patterns, and harmful medication combinations, and to generate real-time alerts for pharmacists or healthcare professionals prior to drug dispensing. The invention provides an integrated automated solution that reduces human error, enhances prescription accuracy, improves patient safety, and supports clinical decision-making in healthcare environments.
