TITLE OF INVENTION	
54	A SYSTEM FOR VERIFYING THE NOVELTY AND POTENTIAL PATENTABILITY OF A CONCEPTUAL IDEA AGAINST A COMPREHENSIVE AND UNIFIED DATABASE OF GLOBAL PRIOR ART

57	The present invention is related to a system for verifying the novelty and potential patentability of a conceptual idea against a comprehensive and unified database of global prior art. This invention discloses an AI-powered system for automated novelty assessment and patentability analysis of conceptual ideas. The system processes a natural language description of an idea using a Natural Language Processing (NLP) model to generate a semantic vector representation, which is then used to query a unified vector database containing both academic literature and patent documents. By retrieving and analyzing semantically similar prior art, the system computes a quantitative novelty score and generates a binary patentability indicator. The invention provides a comprehensive solution that automates the initial novelty verification process, overcoming the limitations of manual, keyword-based searches by delivering rapid, cross-domain semantic analysis with actionable results including similarity scores, patentability decisions, and research enhancement suggestions.
